

Multi-model Intercomparison Project on the Saskatchewan-Nelson-Churchill River Basin (Nelson-MiP project)

Monthly meeting - 12 February 2020

Agenda

1. Presentation of gauging stations submitted
2. Selection of gauge stations for calibration/validation for Phase 0 & Phase 1
3. Decision on time periods for model calibration/validation
4. Discussion on a standardized meteorological forcing data
5. Discussion on a common routing scheme and geophysical input data

Presentation of the gauge stations submitted

Selection of gauge stations for calibration/validation (Phases 0 & 1)

- **Search criteria:**

Station == Natural

Data Period == 1970 to 2016

Total Years ≥ 35

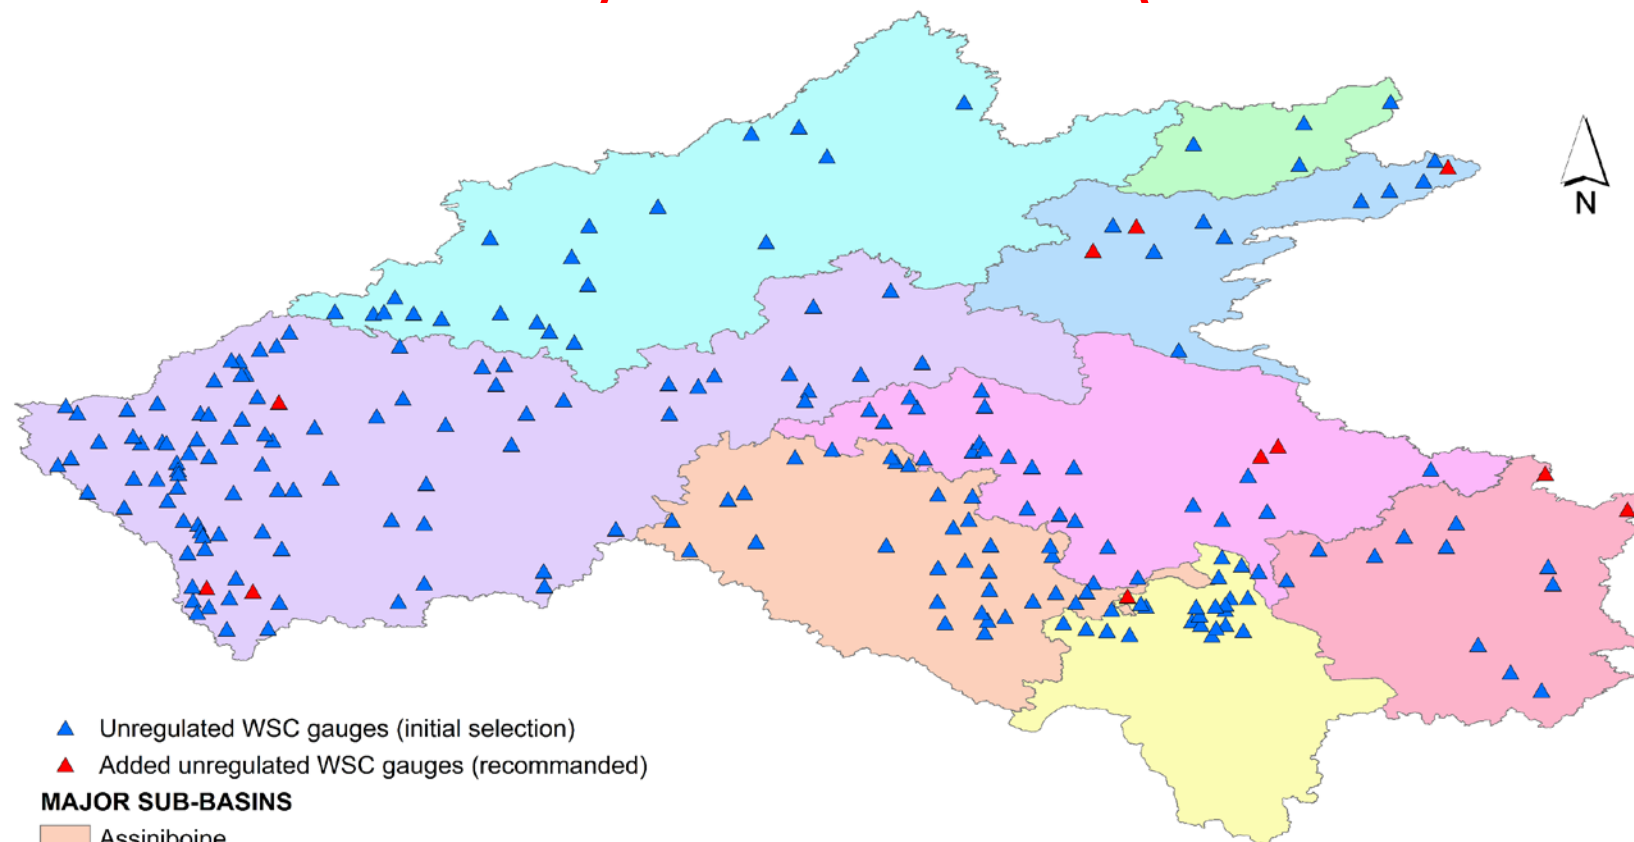

Drainage area $\geq 200 \text{ km}^2$

+

Stations submitted but not meeting search criteria

- 291 (natural) gauge stations identified + **11 stations added**

Selection of gauge stations for calibration/validation (Phases 0 & 1)

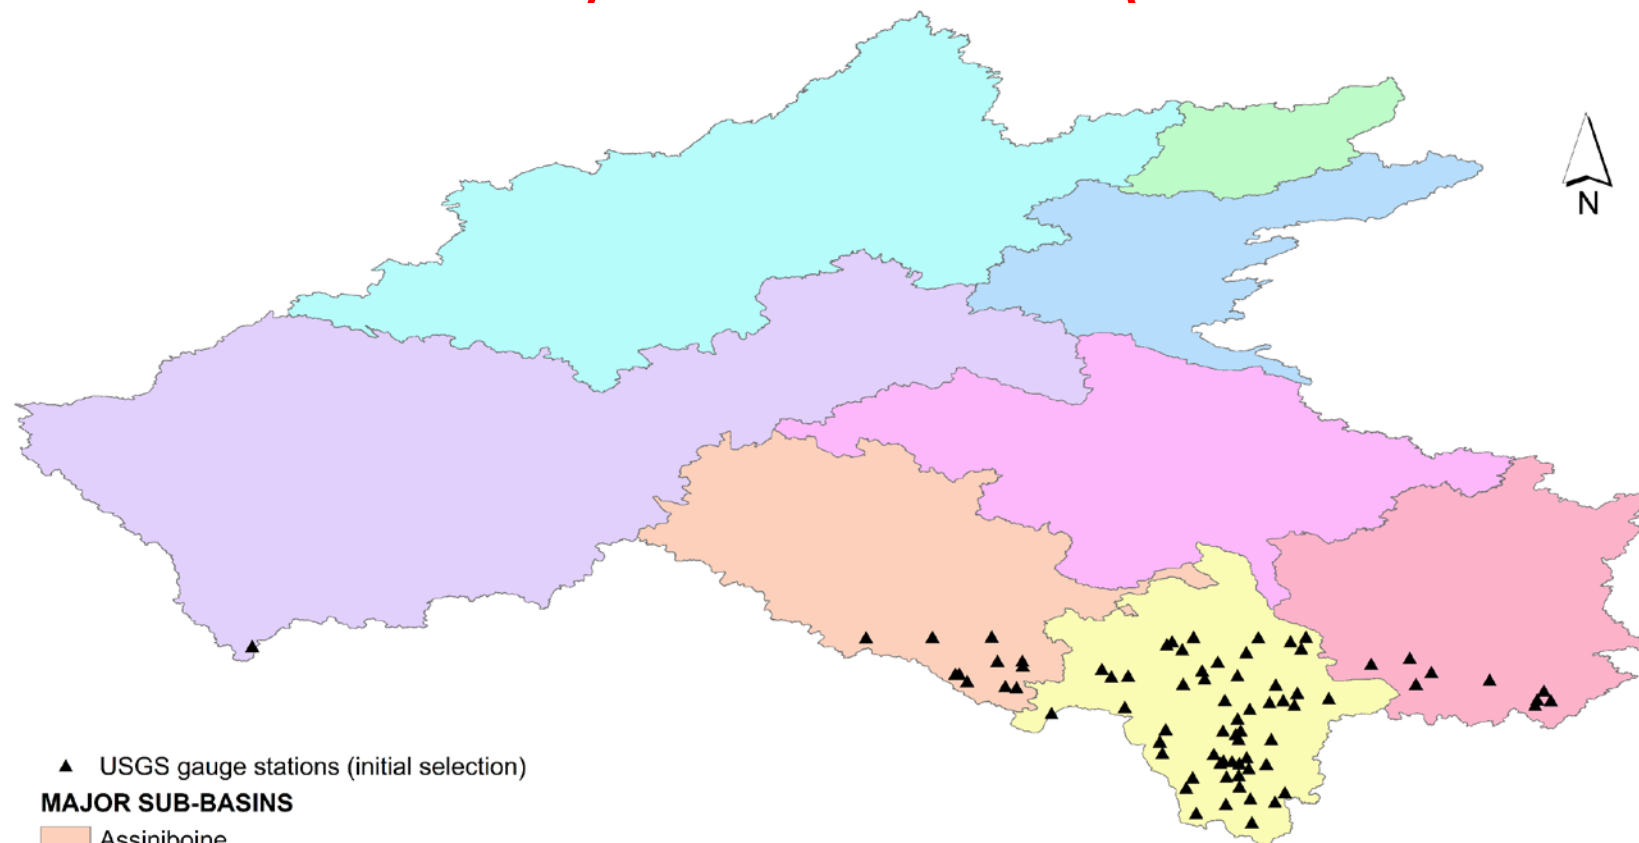

- ▲ Unregulated WSC gauges (initial selection)
- ▲ Added unregulated WSC gauges (recommended)

MAJOR SUB-BASINS

- Assiniboine
- Lake Winnipeg
- Lower Churchill
- Nelson
- Red River
- Saskatchewan
- Upper Churchill
- Winnipeg

Sub-basins	Number of WSC natural stations
Assiniboine	32
Lake Winnipeg	28
Winnipeg river	13
Upper Churchill	20
Lower Churchill	4
Saskatchewan river	94
Red River	23
Nelson river	12

Selection of gauge stations for calibration/validation (Phases 0 & 1)

▲ USGS gauge stations (initial selection)

MAJOR SUB-BASINS

- Assiniboine
- Lake Winnipeg
- Lower Churchill
- Nelson
- Red River
- Saskatchewan
- Upper Churchill
- Winnipeg

Sub-basins	Number of USGS stations
Assiniboine	11
Lake Winnipeg	-
Winnipeg river	9
Upper Churchill	-
Lower Churchill	-
Saskatchewan river	1
Red River	55
Nelson river	-

0 115 230 460 690 920 Km

Time periods for calibration/validation

- Calibration

MESH		X		
SWAT-RRB		X		X
Noah-MP				

- We have to choose between ERA5 and WFDEI-GEM-CaPA
- WFDEI-GEM-CaPA ➔ 3-hourly, 0.125° ~ 10 km, 1979-2016
(huss, pr, ps, rlds, rsds, sfcWind, tas)
- ERA 5 ➔ 1-hourly, ~31km-grid, 137 levels to 0.01hPA, 1979-near real time

Routing scheme and other geophysical inputs

- **Land use/ land cover**: North American Land Change Monitoring System (NALCMS)
- NALCMS is provided at 250m and **30m** spatial resolution, contains 19 land cover classes, and is publicly available from <http://www.cec.org/tools-and-resources/map-files/land-cover-2010-landsat-30m>.
- **Soil data**: Global Soil Dataset for Earth System Modelling (GSDE)
- GSDE is provided at 30 arc-second resolution (**~1km**), and contains 11 types of soil general information for soil profiles and 34 soil properties for 8 depths up to 2.3 m. It can be downloaded from <http://globalchange.bnu.edu.cn/research/soilw#download>.

Routing scheme and other geophysical inputs

- We should decide on using a standardized routing scheme or not.
- Bryan Tolson's group (UWaterloo) offers to produce a routing scheme (including lakes) if all modelers will use it.
- If Bryan idea is accepted, we should also decide whether the routing scheme shall be derived using HydroSHEDS 3-arc sec DEM (~90m) or MERIT Hydro 3-arc sec data products (<https://doi.org/10.1029/2019WR024873>).

Follow Up

1. Ajay will follow up with analysis of wet/dry periods from 1980-2016 for selection of calibration and validation periods.
 - Recommendation to be made before next meeting
2. Forcing data selection will be circulated (based on discussion and follow up) before next meeting
3. Hervé will refine and circulate an updated gauge selection map
4. All groups to explore soil datasets to be used
 1. Provide recommendations of datasets to Hervé by **March 9**
5. All groups to consider offline routing advantages/disadvantages
6. Next meeting scheduled for **Wednesday March 11 @ 10AM MST**
